INTRODUCE MODIFIED PRESSURE CONTROLLER**

**\*\*CONF ALL**

**MODIFICATIONS**

MODIFICATION CLASSIFICATION					
MAJOR	None				
MINOR	39674K12828				

**NOTE:** As per EASA IR 21, a minor change is one that has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics affecting the airworthiness of the product. All other changes are major changes.

**REASON/DESCRIPTION/OPERATIONAL CONSEQUENCES**

Some operators have reported that sometimes the pressure port protective caps, used during storage and shipment, have not been removed after installation of the Cabin Pressure Controller (CPC), 11HL and 12HL, in the aircraft. If the protective caps are not removed from the pressure transducer and the back-up sensor the correct operation of the CPC is impeded. Also for the identification of the CPC in the aircraft and to change FC43 from class 3 to class 1, a software update is required.

This Service Bulletin is published to advise all operators of the issue of the NORD-MICRO Service Bulletin No. 20791-21-002 (20791-21-003 and 15702-21-007 as necessary). The Vendor Service Bulletin (VSB) details the replacement of the pressure port protective caps with a new design of pressure port protection, and the software upgrade.

The accomplishment of this Service Bulletin will make sure that the specific maintenance mishandling of the pressure port protective caps is avoided.

**C. REASON**

(1) History

Some operators have reported that sometimes the pressure port protective caps, used during storage and shipment, have not been removed after installation of the Cabin Pressure Controller (CPC), 11HL and 12HL, in the aircraft. If the protective caps are not removed from the pressure transducer and the back-up sensor the correct operation of the CPC is impeded. Also for the identification of the CPC in the aircraft and to change FC43 from class 3 to class 1, a software update is required.

(2) Objective/Action

This Service Bulletin is published to advise all operators of the issue of the NORD-MICRO Service Bulletin No. 20791-21-002 (20791-21-003 and 15702-21-007 as necessary). The Vendor Service Bulletin (VSB) details the replacement of the pressure port protective caps with a new design of pressure port protection, and the software upgrade.

(3) Advantages

The accomplishment of this Service Bulletin will make sure that the specific maintenance mishandling of the pressure port protective caps is avoided.

(4) Operational/Maintenance Consequences

If an aircraft listed in the effectivity has a modification or repair embodied that is not of AIRBUS origin, and which affects the content of this Service Bulletin, the operator is responsible for obtaining approval by its airworthiness authority for any adaptation necessary before incorporation of the Service Bulletin.

**G. MANPOWER**

The manpower estimates given in this Service Bulletin are based on the direct labor cost to do the work. These estimates assume that the work will be done by experienced personnel, and may need to be revised upwards to suit operator's circumstances. The estimates do not include the time to prepare, plan or inspect the work. Manufacture and procurement of parts and tools, drying times for paints, sealants, etc., and general administration work are also not included.
